EARLY ACCESS PRODUCT PREVIEW / COMPLETELY FREE FOR NOW

A path built around you

Whether you are starting from zero, switching careers or growing in your current role, DataPath begins with your target - then shows the exact skills, topics and proof needed to move forward.

ANALYSE

Data Analyst, BI Analyst, Product Analyst and Data Business Analyst

BUILD

Analytics Engineer, Data Engineer, Cloud Data Engineer, Data Architect and Database Administrator

MODEL

Data Scientist, Machine Learning Engineer, AI Engineer, Generative AI Engineer and MLOps Engineer

TRUST

Data Governance Specialist, Data Quality Analyst and Data Steward

LEAD

Data and AI Product Manager

DISCOVER

Not sure yet? Use career discovery to find a practical starting point based on your interests.

Your industry matters too

Choose Banking, Finance, Marketing, Healthcare, Retail, Technology, Telecommunications, Government or a cross-industry path. Your roadmap adds the business language, metrics, risks and project direction relevant to that sector.

Learn, practise, prove, improve

DataPath connects the parts that are usually scattered across course platforms, spreadsheets, bookmarks and interview notes.

01 / DIAGNOSE

Map your existing skills and gaps without treating self-assessment as proof.

02 / LEARN

Follow a curated role-to-skill-to-level roadmap with focused lesson guidance.

03 / PRACTISE

Apply each topic to a realistic task, edge case or small dataset.

04 / ASSESS

Complete technical lesson, level, skill and cumulative quizzes.

05 / REVIEW

Wrong answers return weak topics to your roadmap so gaps are repaired.

06 / APPLY

Build a sector-relevant portfolio project and prepare to explain it clearly.

07 / PREPARE

Use interview practice, CV guidance, job checklists and application tracking.

08 / PROVE

Export a transparent record of lessons, evidence, checks and skill exams.

One career workspace

Open DataPath and see the next useful action, the reason it matters and the evidence that will count.

Your roadmap

A nested map of skills, levels and topics for your selected role, adjusted to your starting point and available time.

Today's mission

A direct next step with estimated effort, current progress and a focused-session action.

Technical quizzes

Five questions per lesson, ten per level, twenty for the skill, plus cumulative review.

Proof Ledger

A clear record of completed lessons, saved evidence, passed checks and technical skill exams.

Resource library

Official guides, focused YouTube discovery, free/paid preference and the tools required for your path.

Career studio

Portfolio guidance, technical and behavioural interview practice, CV support and application tracking.

Industry knowledge

Important workflows, terminology, metrics, controls and project cases for your chosen sector.

AI coach - optional

Personalised feedback when a provider is configured and you explicitly choose to share the request.

Progress with receipts

DataPath does not call a skill mastered because you watched a video or clicked a checkbox. Readiness should be understandable and backed by work.

GAP	BUILDING	ASSESSMENT DUE	PROVEN
Required work has not started.	Lessons, evidence or checks are in progress.	Required gap lessons are complete; technical validation remains.	The skill exam is passed and required lesson evidence is saved.

What your portfolio should show

A strong project explains the business problem, data, assumptions, method, validation, key insight, decision or measurable impact, limitations and next step. DataPath gives you that structure and adapts the project direction to your selected industry.

No invented readiness score

Every status comes from saved work and assessment results. You can inspect why a skill has its current status.

Your data remains portable

Export your learning state and your Proof Ledger. Guest progress stays in the browser; account storage is available when configured.

A career coach built around evidence

The goal is simple: help you spend less time wondering what to study and more time building skills you can explain, demonstrate and use.

Clear direction

See the skills your target role actually needs and how they depend on one another.

Practical context

Understand how tools and technical topics connect to real industry decisions.

Honest validation

Use technical checks and project evidence to find what is strong and what needs work.

Career connection

Move from learning to projects, interviews, CV evidence and job preparation in the same workspace.

Your pace

Choose your target period and weekly availability. DataPath shows whether the plan is realistic.

Free for now

The complete current experience is available without a DataPath paywall during the early-access phase.

Ready to build your path?

Choose your role, select your industry and start with one focused mission. Ask the DataPath team for access to the current early-access build.

DataPath is a learning and career-planning product. Skill checks are learning signals rather than accredited professional certification, and time estimates are planning aids rather than job guarantees.
