1 Welcome to DataPath

Guest mode

The current landing page. Screens in this guide show a local guest preview, not a publicly deployed service.

DataPath helps you choose a data career or learn one tool, skill or language. It brings a learning plan, practice, review and project preparation into one workspace. You can begin with no coding experience or build on what you already know.

Start with Find my path. If you only want a taste first, Try a quick challenge asks a small question about shop sales. That landing-page sample does not record learning progress.

This guide follows a new learner choosing Data Analyst and Banking. Your topics, examples and estimates will change with your choices. The current preview supports guest learning; account sign-in and AI need configuration before you can use them.

2 Your learning journey

Start with the next suggested activity. Guest work saves in this browser; account users must use Save progress. A project completion check is your own review.

You do not need to do everything at once. Choose a direction, set a pace you can keep, and follow the next suggested activity. A beginner starts with a small table before moving into the main roadmap.

Practice and quizzes provide feedback. Reviews bring you back to topics that need attention. Projects help you explain what you can do using work that someone else can inspect.

A completed exercise or project is evidence of that activity. It is not a promise of a job or an independently awarded qualification.

3 Choose a career or a focused skill

Browse a role to preview it. Your choice changes only when you select Use this path.

Q Search roles or tools

Try Python, SQL or analyst...

Career group

Use this path →

Career previews let you compare a role before changing your choice.

Choose Full career path for a wider set of skills, or One tool, skill or language for a focused plan. If you are unsure, use Find my fit or the beginner shortcut.

For careers, search by role or tool, filter by group, and read the preview. Select Use this path when you decide. A focused path lets you choose one skill and the depth you want to reach.

Choose your target industry so examples and project ideas are relevant to you. You can also explore before choosing an industry. Describe your experience, use the optional placement check, and adjust tools or levels if needed. Your answers help choose a starting point; they do not certify your ability.

4 Set a pace you can keep

WELCOME TO YOUR NEXT CHAPTER

A path that starts with you.

Starting fresh or building on experience? Let's find your direction and the skills that will get you there.

1

Your direction

2

Your starting point

3

Your pace

Make room for steady progress.

Choose your target period. We'll show you whether your available time matches the learning effort.

SUGGESTED PACE APPLIED

4 hours a week · 53 weeks

Based on 183 remaining learning hours, including your project, with approximately 15% extra time for review and interruptions. Your selected skills, target levels, starting point and saved progress shape the estimate.

This is a suggested schedule, not a deadline. Change either field below to use your own pace.

Use suggested pace

Set my own pace

Desired completion period (weeks)

Hours available each week

24

8

Learning resources

Free only

 **Data Analyst**

9 skill areas · 183 estimated hours including a portfolio project

The suggested pace is editable. The time shown belongs to this example path, not to every learner.

DataPath suggests weekly study time and a number of weeks based on your chosen work. The estimate allows extra time for review and interruptions. It is a planning aid, not a deadline or a prediction of exactly how fast you will learn.

Keep the suggestion, choose Set my own pace, or edit either time field. Select Free only if you want to filter out optional paid learning resources. Then choose Build my learning path.

You can change your direction and pace later. Changing a plan does not mean you have completed the lessons you remove from it.

YOUR NEXT STEP

No experience needed

Your first look at data

Start with a small table and one question. We'll guide you through it.

Start my first lesson →

Go at your own pace

This week

A little progress, regularly.

0h / 4h

4 h left to reach your goal

View my progress →

Based on logged study sessions · resets Monday

Missed some study time? Adjust my plan

Your study plan this week

240 minutes left in your goal

A suggested order for the remaining Monday–Sunday weekly goal. Logged study time reduces the budget; it never completes a lesson. The plan adjusts as you learn. Split longer activities across several sittings.

Start here

Your first look at data

30 min suggested

Open activity

The overview separates the next activity, time logged and learning evidence.

The overview shows your next suggested activity and this week's study plan. Start there when you are unsure what to do. A new learner sees Start my first lesson.

Time logged tells you how much study time you recorded. It does not complete a lesson or prove a skill. The weekly plan changes as you finish work and record study sessions.

Use Practice lab to try an exercise and My progress to review your evidence. Beginners see a shorter menu; Explore all reveals My roadmap, projects, the career toolkit and other areas.

6 Complete your first lesson

START FROM ZERO · ABOUT 10–15 MINUTES · NO CODING NEEDED

Your first investigation: what did the shop sell?

Data is recorded information. Working with data means using those records to answer a question and explaining how you checked your answer.

1
Read the table
Continue here

2
Filter the records
Coming next

3
Calculate the total
Coming next

4
Explain the result
Coming next

Step 1 of 4 · One small step at a time.

Example shop orders · fictional data

Order ID	Status	Amount
101	Completed	\$120
102	Pending	\$80
103	Completed	\$60

1. Read a small table

A **row** runs across and describes one order. A **column** runs down and holds one type of information, such as amount. An **ID** identifies a record. Here, order 101 has completed and its amount is \$120.

How many orders are recorded?

Check and continue

► Words used in this lesson

Progress saves automatically in this browser. Switching browsers or clearing browser data can remove it. Use Settings to export a backup.

Small estate. Real skills. Your future.

The first lesson begins with a small fictional table and a question you can answer without code.

Open Start my first lesson. Read the table, choose the relevant records, calculate the total, and explain why your answer is right. Use Check and continue after each answer.

If an answer is wrong, read the explanation and try again. The lesson keeps completed steps and offers a recap, so you can resume rather than start over.

After your first achievement, continue into guided totals and averages for your industry. Work through the example, guided questions and independent task. This introductory work helps you prepare for the roadmap; it does not automatically pass its quizzes.

7 Use your roadmap

The screenshot displays the 'My roadmap' page in the DataPath application. The interface is divided into several sections:

- Header:** 'My workspace / My roadmap' and 'Guest mode'.
- Left Sidebar:** A vertical menu with icons for 'LEARN', 'My next lesson', 'My roadmap' (highlighted), 'Practice lab', 'My progress', 'RESOURCES' (Resource library, Tools setup), and 'YOUR CAREER' (Interview studio, My projects, Career toolkit, AI coach, Show less).
- Main Content Area:**
 - Top Bar:** 'How your learning connects to Banking'.
 - Progress Path:** A sequence of steps: 01 Learn (Concept + example) → 02 Practice (Edge case + evidence) → 03 Assess (Technical quiz) → 04 Review (Weak topics return).
 - YOUR SKILLS:** A list of skills with progress bars: SQL (0/6 topics completed), Excel (0/6 topics completed), Statistics (0/6 topics completed), Data cleaning (0/6 topics completed), Power BI (0/6 topics completed), Data storytelling (0/6 topics completed), and Business analysis (0/6 topics completed).
 - SQL Detail View:**
 - Target:** 2/3.
 - Instructions:** 'You can read any lesson. Complete its prerequisites and checks to record completion.'
 - Beginner Level:**
 - 1. SELECT and WHERE (3 hrs - Week 1) - 'Your next lesson'.
 - 2. GROUP BY and HAVING (3 hrs - Week 2) - 'Prerequisites needed'.
 - 3. INNER and LEFT JOIN (3 hrs - Week 3) - 'Prerequisites needed'.
 - LEVEL QUIZ:** SQL - Beginner Assessment (10 questions - Pass 80%). 'Complete the required topic lessons and mini-quizzes to unlock this assessment.'
 - Intermediate Level:**
 - 4. Subqueries and CTEs (5 hrs - Week 4).

Skills and levels organize the topics in your chosen plan.

Open My roadmap and choose a skill. Expand a topic to read the lesson, examples and learning resources. Work through its steps and write your own evidence or notes rather than only ticking it off.

The page explains what you need before a topic, level assessment or skill check can be completed. Follow those requirements. If something is locked, return to the required lessons or checks.

Use Tools setup when a lesson needs software outside DataPath. Resource library helps you find additional learning material; following an external resource does not automatically record completion here.

8 Practise SQL

The screenshot displays the DataCamp Practice Lab interface. On the left, a sidebar contains navigation links: 'LEARN', 'My next lesson', 'Practice lab' (highlighted), 'My progress', and 'Explore all'. The main area is titled 'My workspace / Practice lab' and features a 'Find your next challenge' section with a search bar and a list of exercises. The selected exercise is 'SQL - RUN QUERIES' with the title 'SQL workbench'. Below this, there are three 'Applied case - self-review' exercises: 'Investigate duplicated totals', 'Audit a workbook', and 'Audit sample bias'. The right panel shows the SQL query editor with the following query:

```
SELECT transaction_id, amount FROM transactions WHERE status = 'completed' AND amount >= 500 ORDER BY amount DESC
```

. Below the editor, a 'Run query' button is visible. The results section shows a 'Query passed' message and a table of results:

transaction_id	amount
184	958
181	728
185	518

At the bottom, a 'Your progress on this challenge' section shows '2 saved attempts · 2 successful · Checks passed: 100% initially → 100% latest'.

An actual passing SQL run using synthetic Banking data.

Open Practice lab. Beginners can continue guided work or choose I'm ready to explore independent exercises. Open Find your next challenge and select SQL workbench, or start the recommended exercise.

Read the task and table information. Write your query, select Run query, and compare the feedback with the request. Check filters, returned columns, totals and ordering when an answer fails.

Query passed means your answer matched the exercise checks, including alternate cases. It does not mean every possible query or dataset will work. A practice pass is separate from a topic quiz, lesson completion or a full skill check.

9 Practise Python and other skills

The screenshot shows the DataPath Practice Lab interface. On the left is a sidebar with navigation options: 'LEARN', 'My next lesson', 'Practice lab' (selected), 'My progress', and 'Explore all'. The main area is titled 'My workspace / Practice lab' and 'Guest mode'. It features a 'Find your next challenge' section with a search bar and a list of exercises. The selected exercise is 'Summarise completed work in Python', a beginner-level task (15 min) about data cleaning and missing values. Below the exercise list are buttons for 'Check my work' and 'Reset starter'. The 'Passed' status is displayed, indicating that the Python function passed all 4 datasets. The result is 380, and all four checks (Practice dataset, Changed values and input order, Empty input, Zero, missing values and pending records) are passed. A link to 'Saved attempts and submission revisions' is also present. The footer includes the DataPath logo and the tagline 'Small steps. Real skills. Your future.'

This Python exercise passed all four of its datasets. Other exercises can have different checks.

Select a Python exercise from Find your next challenge. Read the instructions and starter code, write the requested solution, then choose Check my work. The first run can take longer while the practice tools load.

Passed means your solution met this exercise's checks. If it fails, use the feedback to fix the reasoning, including empty data and missing values. Do not replace your solution with a fixed answer that only matches the example.

Other exercises include spreadsheet formulas, DAX measures, calculations and applied cases. Formula exercises support the functions described in their instructions. A self-reviewed case asks you to inspect your own work; it is different from an automatically checked pass.

SKILL MATRIX

What the record actually proves

▶ Choose what to export

SKILL	LESSONS	EVIDENCE	CHECKS	SKILL EXAM	STATUS
SQL Target L2	0/6	1/6	0/2	—	● Building
Excel Target L2	0/6	0/6	0/2	—	● Gap
Statistics Target L2	0/6	0/6	0/2	—	● Gap
Data cleaning Target L2	0/6	0/6	0/2	—	● Gap
Power BI Target L2	0/6	0/6	0/2	—	● Gap
Data storytelling Target L2	0/6	0/6	0/2	—	● Gap
Business analysis Target L1	0/3	0/3	0/1	—	● Gap
Python Target L1	0/3	1/3	0/1	—	● Building
Data modeling Target L1	0/3	0/3	0/1	—	● Gap

Proven means: the skill exam passed and every required lesson has saved evidence. Click any row to work on it.

The progress page separates lessons, written evidence, quizzes, practice and skill checks.

Topic and level quizzes require at least 80 percent. A full skill check requires at least 95 percent. The page shows the questions and the requirements to unlock each check. If you miss questions, revisit the related lessons and try again when ready.

My progress shows several types of evidence. An attempt is not always a pass. A note is your explanation of the work. A project completion tick is your own review. Keep those differences in mind when sharing your progress.

Choose what to export to download selected records. Share them alongside the actual work so a reviewer can understand what you did. A record from DataPath is not an independent professional credential.

11 Return for review

Use review suggestions to revisit topics after learning them. Weak topics can return to your plan after a quiz, even if you previously completed them. This is a chance to close a gap, not a loss of all your work.

Scheduled review spaces successful checks over time. Do the suggested review when it is due and pay attention to feedback. Repeating a successful check several times on the same day does not replace returning later.

If the plan feels too heavy, use the option to adjust your study plan after missed time. A lighter schedule changes the pace; it does not silently pass unfinished lessons.

For interview preparation, Explore all opens Interview studio. Choose a question, write an answer and compare it with the review criteria. Download your journal to keep your answers. Optional AI feedback requires sign-in, configuration and consent.

RESOURCES

- Resource library
- Tools setup

YOUR CAREER

- Interview studio
- My projects**
- Career toolkit
- AI coach
- Show less

Definition of done

- A reproducible artifact: repository, workbook, dashboard or documented audit.
- A README explaining the problem, data, assumptions and how to reproduce results.
- Validation evidence, limitations, and a short presentation of the decision or impact.

Your project plan

Synthetic starter: one row per payment; value is measured in EGP. Blank value means unknown, not zero. Five rows support hand checks, not statistical or production-scale claims. Extend with documented synthetic cases or a licensed public dataset when needed.

[Download project starter data \(CSV\)](#)

▼ 1. Define the question

Name the stakeholder and scope this decision: Prioritise payment reconciliation exceptions. Define row grain, field types and exclusions.

Ready for review when: A reviewer can trace the question to specific fields and a measurable outcome.

► 2. Build a reproducible artifact

► 3. Test and reconcile

► 4. Present the decision

► Topics to demonstrate (45)

Use these criteria for self-review. DataPath does not independently verify or grade this project.

[► Prepare your project for a reviewer](#)

The project plan gives milestones and criteria for your own review.

Open My projects. Read the brief, industry context and definition of done. Follow the milestones: define the question, build a reproducible piece of work, test the result and explain the decision.

Download project starter data if useful. It is a small fictional example, not proof of a real business result. Some suggested measures need more data than the starter contains. Record missing information instead of inventing values.

Create the actual workbook, report, code or other work in the appropriate tools. Add evidence, links and reflection in the project notes. DataPath does not independently grade the finished project.

13 Export and share your project

Add project notes first. Then open Prepare your project for a reviewer and check the items you have actually addressed: question, data, method, validation, conclusion and accessible links.

Choose Download notes and checklist to keep the notes and your current checks in a text document. Those preparation checks last for the visit, so download them if you need a lasting copy. Use Download project starter data for a separate copy of the practice data.

Share your exported notes together with the actual work. A notes download does not package or publish the linked workbook, dashboard or code. Make sure the intended reviewer can open those links and that you have permission to share the data.

Only mark the project complete when you have delivered and checked its requirements. The completion mark records your own assessment. It does not create an independently verified certificate.

14 Prepare your CV and applications

The screenshot displays the 'Career toolkit' interface. On the left is a sidebar with navigation links: LEARN (My next lesson, My roadmap, Practice lab, My progress), RESOURCES (Resource library, Tools setup), and YOUR CAREER (Interview studio, My projects, Career toolkit, AI coach, Show less). The main header shows 'My workspace / Career toolkit' and 'Guest mode'. The title 'Career toolkit' is prominent, with a subtitle 'Data Analyst - Built around your goals, at your pace.' and a 'FREE TO LEARN' badge. The main content is divided into two columns. The left column, 'Build an evidence-first CV', includes instructions to use substantiated achievements, a 'Name' field, a 'Professional summary' field, an 'Achievement bullets' field with a prompt 'action + method + verified result', and a 'Portfolio / professional links' field. It features an 'Export CV draft' button and a checkbox for sharing the profile with an AI provider. The right column, 'Ready for your next opportunity', contains a checklist of six tasks: publishing a portfolio, tailoring a CV, preparing STAR stories, completing a mock interview, researching a company, and tracking applications. Below this is an 'Application tracker' section with fields for 'Company', 'Role' (pre-filled with 'Data Analyst'), and 'Follow-up date' (with a date format 'dd/mm/yyyy' and a calendar icon).

The career toolkit combines a CV draft, preparation checklist and application tracker.

Open Career toolkit. Enter your name, summary, truthful achievements and portfolio links. Describe what you did and how you checked it. Use Export CV draft to download plain text you can place into your preferred CV design.

Use the opportunity checklist to prepare your portfolio, interview stories and company research. Add a company, role and follow-up date to Application tracker, then update its status as you make progress.

The tracker records your entries. It does not send applications, contact employers or promise reminders outside the app. Review with AI is optional and unavailable until account access and a provider are configured.

15 Use the optional AI coach

The current local preview shows the unconfigured state. No live AI reply was generated for this guide.

AI coach offers optional help with study questions, skill gaps and project ideas. The suggested next step shown as Curated guidance remains available without AI.

When AI is available, sign in, read the sharing notice, choose whether to consent and enter your question. Do not include sensitive information. The coach may also help with interview reflection or CV wording through those areas.

Treat a reply as advice and check it against your lessons and actual work. It does not independently certify skills, complete your curriculum or guarantee employment. Live AI answer quality has not been verified for this edition.

16 Save your work safely

Guest mode saves automatically in this browser. Use Settings and profile, then Export progress, to download a backup regularly. A different browser or device will not automatically have that work. Clearing browser data can remove it.

When accounts are available, sign in and use Save progress. Wait for the saved confirmation before leaving. Account saving is an explicit action, so do not assume every edit has already reached your account.

Guest work and account work are separate. Signing in does not silently copy guest progress into an account. Use the explicit import option in Settings if you want to replace the account workspace with guest work, then save.

Import backup replaces the current workspace after confirmation. Export anything you want to keep first. In the local preview captured here, accounts are unavailable because they have not been configured.

17 Questions and troubleshooting

Why did my save conflict? Another tab or session may have saved a newer version. Export your current work before reloading. Reload the saved version, carefully reapply the changes you still need, then save again. DataPath does not automatically combine conflicting edits.

What if I switch browsers as a guest? Your work stays in the original browser. Export a backup there and import it into the new browser. Without a backup or an account save, the app cannot recover cleared guest data.

Why is an assessment locked? Complete the required lessons and earlier checks shown on the page. A self-assessed starting level or a practice attempt does not replace those requirements.

Why did the code exercise time out? Check the instructions, simplify the solution and avoid loops that never end. Retry once the practice tools finish loading. If the problem continues, keep a copy of your answer and report the exercise name and visible message.

Why is AI unavailable? It needs sign-in and configuration, and can also stop temporarily because of usage limits or a service problem. Continue with the lessons and curated practice. Do not assume the app has lost your work.

Why is a project or CV export missing my finished files? Exports contain the notes or draft described by the button. Keep and share the actual project files separately.

Where did a skill go after I changed paths? The view follows your current direction and industry. Return to the relevant path to inspect its records. Export a backup before major changes, and review the new plan carefully.
